## Aims and Objectives

India is aiming at spectacular economic development and it needs to be inclusive of all, particularly rural development. Needless to mention that such an economic growth and development cannot be achieved without adequate and efficient energy that further requires dealing with several

issues and concerns related to the management of energy along with the environmental issues. The solution to energy related problems needs to be adopted to local environment and other conditions. For instance micro hydroelectric energy solutions are feasible for hilly tracts with numerous water resources, the coastal areas are better served by wind energy. Biomass energy resources are well suited for rural areas. In addition to conventional energy resources a comprehensive strategy needs to be developed for growth and utilization of non-conventional, renewable energy sources.

The government has initiated several programmes in this direction. Industry, NGOs, R&D organizations and academia are major participants in development of such energy alternatives. The users in rural & urban sectors are responding to these moves with great expectation. It is time to look at the above efforts and evolve an integrated energy management system so as to provide energy alternatives for economic growth and development for rural & urban areas. This will finally fulfill the vision of inclusive growth of the country.

The proposed conference will deliberate on the above and related issues and also highlight the current thinking and future trends in the area of Green Energy Alternatives for Urban & Rural Development along with the environmental issues. Professionals from Ministries, Government organizations, Academic and Technical Institutions, R&D Laboratories, Industry, NGOs etc. are invited to participate in the Conference.
